Comprehensive Enterprise Access Points to Lead the Enterprise Data Revolution

To meet the ever-changing landscape of enterprise environments and the growing demand for device connectivity, D-Link is committed to providing high-speed and high-quality Enterprise Access Points (EAP). These EAPs are designed to offer enterprises a more stable, efficient, and secure wireless network communication environment. Unveiled at MWC 2024, the range of new enterprise-grade access points is specifically tailored for large-scale wireless network deployments within enterprises. They are intended for establishing Wireless Local Area Networks (WLANs) to meet the wireless connectivity needs of multiple users while ensuring seamless communication between wireless devices and wired networks.

D-Link's EAP devices feature an intelligent channel selection function (Auto RF), automatically adjusting the frequency settings of wireless devices to reduce interference and ensure optimal communication performance, providing users with an enhanced networking experience. Additionally, these devices boast robust security features, including customizable entrance authentication and various Identity Verification options for different SSIDs through VLAN tagging, catering to the diverse needs of individual SSIDs while maintaining network security. Furthermore, centralized and streamlined network management is achievable through the Nuclias Connect management system or Nuclias Cloud, enabling network administrators to analyze, automate, configure, optimize, expand, and maintain network security. D-Link's EAP devices offer outstanding networking performance, integrating advanced security features and convenient management capabilities, meeting the modern enterprise's requirements for an efficient, secure, scalable, and easily managed wireless network solution.

About D-Link

D-Link is a global leader in designing and developing networking and connectivity products and total solutions for consumers, small businesses, medium to large-sized enterprises, and service providers. From relatively modest beginnings in Taiwan, the company has grown into an award-winning global brand in 43 countries. Find out more about D-Link at www.dlink.com
